VOLUME 7, NUMBER 5

## NEW PODCAST NOW LIVE: MALLET FINGER

Subscribe to the Hand Surgery Resource podcasts! Our latest podcast for Mallet Finger is available on [Anchor](#), [Apple](#), [Google](#), [Spotify](#) and [Amazon Podcasters](#).

In this podcast, Dr. Larry Hurst takes you through details of Mallet Finger. The classic "mallet finger" injury involves the forced flexion of the distal interphalangeal (DIP) joint while the finger is in active extension and is caused by the disruption of the extensor tendon over the DIP joint. There are four types of mallet finger injuries, including open and closed forms, and treatment depends on the mechanism of injury, duration of the deformity, associated fractures and presence of osteoarthritis. Chronic mallet finger may lead to swan neck deformity.

Tune in and let us know what you think!
