Volume 4, Number 1

Hand Surgery Source Version 2.0 Launches for 2020!

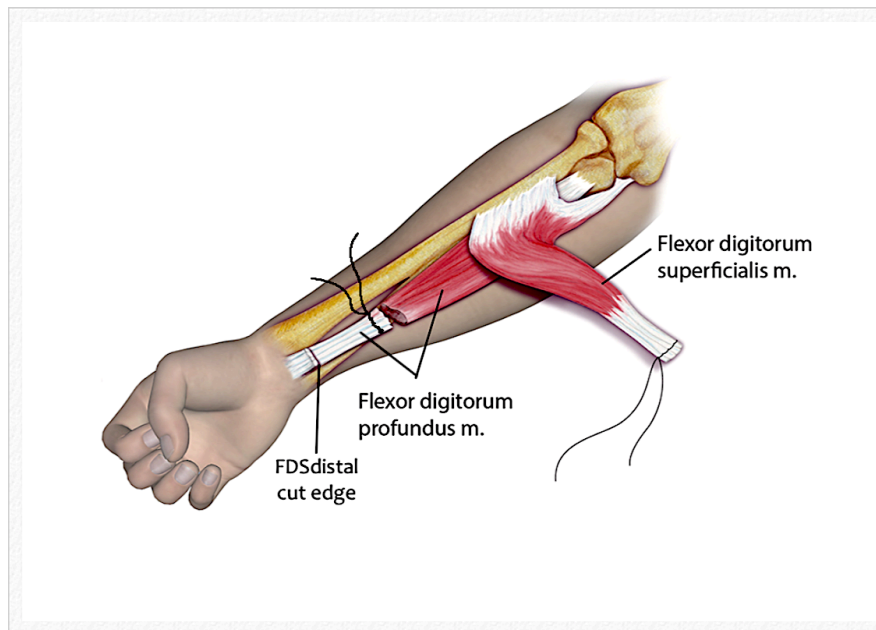

Charcot Marie Tooth Disease

Hand Surgery Source Version 2.0 includes 18 new diagnostic guides with many new skin related guides, including:

Dermatomycosis (Tinea Manuum) on dorsal right hand (arrow)

Version 2.0 also adds **164 new references**, **207 new Pub Med links**, **56 new images** and **1 new video** to the visual learning opportunities available at Hand Surgery Source, for example:

The first step of a Superficialis to Profundus Transfer is to suture all four FDS tendons together and all four FDP tendons together before cutting the FDS tendons distally and the FDP tendons proximally. The FPL (not shown) requires z-lengthening.

In addition, Hand Surgery Source Version 2.0 contains:

- 250 diagnostic guides sections
- 160 exams, tests and signs sections
- 25 diagnostic studies sections
- 2,156 photos and drawings make visualizing the teaching points easy
- 123 videos also support the text
- Hand Surgery Source content is supported by 3,897 references and 3,209 direct links to PubMed
- A strong search option for Hand Surgery Source

Hand Surgery Resource is Now Collaborating with IFSSH!

International Federation of Societies for Surgery of the Hand

		
ARGENTINA	AUSTRALIA	AUSTRIA
		
BELGIUM	BRAZIL	CHINESE-SPEAKING HAND SURGEONS
		
		
Germany	KOREA	MEXICO
		
Philippines	SWITZERLAND	TAIWAN
		
USA	UNITED KINGDOM	VENEZUELA

By linking our web sites, we hope to increase the educational impact of both organizations!

This federation was formed in 1966 for the purpose of coordinating the activities of the various Societies for Surgery of the Hand throughout the world and in this way to increase and spread knowledge of surgery of the hand.
